EDUCATION

San Diego State University

B.S. Management Information Systems | Minor Computer Science

San Diego, CA

Expected Graduation: May 2027

- **GPA:** 3.8
- **Involvement:** AI For All Secretary, AI4Business Research Assistant, AI Club, World Computing Organization, Association of Information Technology Professionals, Asian Pacific Student Alliance Mentor, Asian Business Association Mentor
- **Relevant Courses:** Data Structures and Algorithms (Java/C++), Linear Algebra, Machine Learning, Intro Artificial Intelligence, System Analysis & Design, Principles of Data Science, Database Theory Implementation

PROFESSIONAL EXPERIENCE

SDSU Research Foundation

AI4Business Undergraduate Research Assistant, Teacher's Assistant, & Lab Coordinator

San Diego, CA

January 2026 - Present

- Co-authored "Failures at the Seam," a socio-technical survey of LLM-generated code risks submitted to HICSS; authored the section analyzing technical failure modes (bugs, API misuse, security/licensing risk, performance issues, slopsquatting) synthesized from peer-reviewed literature
- Supported lab operations and growth by reviewing research papers, overseeing sponsor/fundraising outreach, conducting interviews, and drafting monthly AI4Business Lab newsletters.
- Graded/prepared course material, monitored course-related communications, and provided academic support for 36 students across 2 sections of MIS515 at SDSU.

Realty Income

Applied Machine Learning Intern

San Diego, CA

June 2026 - August 2026

- Developed cross functional understanding of Realty Income's triple net lease business model, applying it to score and pitch an acquisition by evaluating its business risk, location risk, and fungibility to project risk adjusted, asset level IRR.
- Identified "Electrical Equipment Manufacturing" as an emerging industry for RI, delivering a sales leaseback investment thesis to C-suite executives, backed by supply chain lag, data-center demand, and investment grade tenant comp analysis.
- Worked across Predictive Analytics, Private Fund, and Portfolio Management teams to define scoring methodologies, feature variables, and deployment architecture for a novel tenant/property risk qualitative assessment tool.

SWCA Environmental Consultants

Business Data Solutions Architect Intern

San Diego, CA

June 2025 - August 2025

- Trained iterations of a time series forecasting model, SARIMAX, to predict a set horizon of values based on previous benefit hour data, trends, and regressive variables such as seasonality and company/region specific agendas.
- Delivered interactive Power BI dashboards to CEO's and senior leadership to uncover new levels of data-driven decisions across workforce planning, benefit allocation, and revenue forecasting.

PROJECTS & OUTSIDE EXPERIENCE

Market Sentiment Analysis

Databricks | Applied Science | Machine Learning | Python

Realty Income

June 2026 - August 2026

- Engineered a sentiment scoring decision engine that grades commercial real estate tenants and properties 0-100, integrating internal, API, and RSS data sources (SEC, FRED, U.S. Census, Google, yFinance) into a MLflow Databricks pipeline.
- Applied transformer based NLP (FinBERT) to quantify sentiment from financial filings and RSS news, building a production grade inference pipeline with feature normalization, confidence scoring, and configurable weights.
- Optimized large scale geospatial feature engineering over 837K row/44 GB Parquet store to extract tract level census data at an address level to refine scoring granularity while maintaining a ~60 seconds scalable runtime.

Malicious URL Detection Neural Network

Report | Machine Learning | Python

San Diego State University

August 2025- December 2025

- Led project drafting, preprocessing, model justification, and evaluation methodology; built a feature-engineering pipeline (Shannon entropy, URL/domain/path length, digit/special-char ratios) underlying all team models.
- Built an Multilayer Perceptron feed forward neural network for 4-class malicious URL classification, achieving 0.92 weighted F1-score on 128,224 URLs using structural and lexical feature engineering.

SWCA Benefit Hours Analysis and Forecasting

Power BI | Microsoft Fabric | Python

San Diego, CA

June 2025 - August 2025

- Aggregated and cleaned multi-year historical benefit data (~3.5 million+ records), including PTO, wellness days, sick leave, and holidays by U.S census region, job role, and pay group.
- Established a Data Pipeline in Microsoft Fabric to uniquely run each iterative combination of employee demographics through separate 200+ lines of python SARIMAX time series forecasting models for vacation and wellness/sick leave hours.

SKILLS

Languages: Python, Java, HTML, C++, SQL, DAX

Applications / Software: Databricks, SQLite Studio, Git, Excel, Power BI, Microsoft Fabric, Azure DevOps

Libraries / Frameworks / Models: Pandas, SARIMAX, Ultralytics YOLO, NumPy, Matplotlib, scikit-learn, Hugging Face
